

NEW FLOW RATE TOTALISER

Trimec has just released the RT20 Flow Rate Totalizer in a robust metal housing. This instrument is compatible with most manufacturers flow meters and comes with scaled pulse & high & low flow alarm outputs as standard.

Some design origins stem from specific requests out of the mining sectors where rugged construction & high visibility readouts are desirable for 24/7 operations.

The RT20 has a large backlite LCD two line display which may be read from a distance typically associated with field re-fuelling & lubrication applications. The instrument has an aluminum weatherproof housing & may be mounted in a number of ways including direct to flow meter.

The DCM GROUP is committed to providing sales and service. If you would like the latest Trimec catalogue or to request a quotation, please don't hesitate to give us a call or send your query via email.
